and uses.*

aurora
BERNINA⁺

aurora – the innovative sewing computer from BERNINA offers a sensational combination of versatility, performance and a wealth of easy to use features. Even for sewing alone, the innovative functions of the aurora 430 are truly impressive. Team it up with the Editor Lite embroidery software complete with embroidery module however, and you'll really be surprised to see how stunningly simple it is to add distinctive appliqués to your favourite things. And with the BERNINA stitch regulator (BSR), which ensures a constant stitch length even at variable speeds, the aurora 440 QE is a genuine world first.

New!

All in one.

Speed regulator

The conveniently positioned speed regulator allows you to adjust the aurora's sewing speed to the particular sewing task – slow for precise work, and faster for more general sewing. This function can also be used for separate spooling.

Start/stop button

The aurora's start/stop button is highly practical. Since it is not necessary to operate a foot control, you can sew at speed with confidence.

Needle thread threader

The practical threading function makes it easy to pass the thread through the eye of the needle in a matter of seconds.

BSR – BERNINA stitch regulator

The BERNINA stitch regulator is a true world first. The presser foot with the three different soles guarantees a more even stitch length with variable sewing speeds, making free-hand quilting fantastically simple.

Presser foot pressure display

The aurora also supports on-screen display of the presser foot pressure. You can adjust the pressure individually for every type of fabric. The current setting is always displayed on screen.

Presser foot display

The presser foot recommended for your chosen embroidery design or stitch type is displayed on screen. This ensures that you will always use the right presser foot for the task in hand – and consequently enjoy the fruits of your labour even more.

Stitch display (symbol)

The aurora offers a wide selection of stitches. The stitch currently being used is therefore always displayed in the form of a distinctive symbol on the screen. This is particularly useful with the scroll function.

Separate winder motor

The aurora's new separate bobbin winder is practical and incredibly user friendly, enabling you to fill empty bobbins without interrupting sewing, embroidery or quilting operations.

Stitch selection

Choosing a particular stitch is now even more user-friendly on the new aurora. Stitches can be selected by pressing the buttons for selecting the stitch numbers or by pressing the scroll buttons. The stitch numbers and the stitch symbols are always shown on the display.

Accessories box

The aurora comes with a whole host of useful accessories. In addition to the bobbins and presser feet (6/9), tools and maintenance accessories supplied as standard, the accessories box can be added to at any time. This box can be attached to the back of the aurora for transport purposes.

Extension table

With the extension table the aurora offers another useful accessory to create a larger working area. The table is simply attached to the freearm.

Embroidery module with BERNINA Editor Lite software (optional)

The software is supplied together with the embroidery module. This BERNINA software allows you to customize many designs before commencing embroidery, for example enlarge or mirror designs, add letters, change colours or combine designs.

Thanks to the embroidery software also integrated (embroidery control on personal computer), you can follow the embroidery operation directly on screen. You can therefore keep track of the current status at all times, even if you are not sitting at the sewing computer the whole time.
